

# LDR tips for safely using **SPACE HEATERS**

## **SAFE STEPS FOR USING YOUR HEATER**

### **PLACEMENT**

Place space heaters on a flat, solid surface away from things that can burn, like furniture and drapes. Keep them at least three feet away from flammable items.

### **PLUGGING**

Plug space heaters directly into a wall outlet, not an extension cord or power strip.

### **SUPERVISION**

Never leave a space heater unattended, especially while you're sleeping. Supervise children and pets around space heaters.

### **MAINTENANCE**

Check your space heater for damage to the cord or plug. Have a professional clean and inspect your heating equipment annually.

### **LOCATION**

Keep space heaters away from water, like sinks and bathrooms.

### **FUEL-BURNING**

If you have a fuel-burning space heater, turn it off and let it cool down before refueling.

### **LABELING**

Buy space heaters that are labeled and tested by a nationally recognized testing company.

### **HYPERTHERMIA**

Be aware that space heaters can cause hyperthermia, especially for children, people with disabilities, and the elderly.
